

PL-200 Practice Test Set 2 – Create apps by using Power Apps (20-25%): Explanation

Question 1:

You are a Power Platform functional consultant. You need to create a chart in a model-driven app and share it with all users in the other business unit. Which two actions should you perform?

- A. Create a system chart.
- B. Create a personal chart.
- C. Export the personal chart and import it as a system chart.
- D. Share the personal chart with the default team for another business unit.
- E. Share the system chart with the default team for another business unit.

Answer Area

- B. Create a personal chart.
- D. Share the personal chart with the default team for another business unit.

Explanation

You can share Personal charts with users and teams. The default team is an owner team created automatically for each business unit containing its users. Sharing a chart with a default team for a business unit shares the chart with all users in that business unit.

[Learn here.](#)

Question 2:

You are a Power Platform functional consultant.

You create a chart and want another department's users to use the chart without sharing it with them.

What should you do?

Solution: Create a personal chart, export it, and give the chart file to the other users and ask them to import it.

Does it meet the solution? If Yes, select True. Otherwise, select False.

- A. True
- B. False

Answer Area

- A. True

Explanation

A personal chart can be exported. Exporting a chart creates an XML file containing the definition of the chart. You can provide the XML file to users, and they can import the XML file to create their version of a personal chart. [Learn here.](#)

Question 3:

You are a Power Platform functional consultant.

You create a chart and want another department's users to use the chart without sharing it with them.

What should you do?

Solution: Create a personal chart, export it, and import it as a system chart.

Does it meet the solution? If Yes, select True. Otherwise, select False.

- A. True
- B. False

Answer Area

- B. False

Explanation

You need to give other users access in a department and not to all the organization's users. System charts are visible to all users by default.

[Learn more here](#)

Question 4:

You are a Power Platform functional consultant.

You are educating one of your team members on the system and personal charts.

Statement: You can share and assign system charts and personal charts with specific app users.

If the statement is correct, select True. Otherwise, select False.

- A. True
- B. False

Answer Area

- B. False

Explanation

System charts are organization-owned charts, making them available to anyone with access to read the data running the app. System charts can't be assigned or shared with specific app users.

[Learn more here](#)

Question 5:

You are a Power Platform functional consultant.

You are building a Canvas app for surveying customers and prospects. Each survey question has only two options. Which one of the following control should you use for survey questions?

- A. Slider
- B. Combo box
- C. Text Input
- D. Check box

Answer Area

D. Check box

Explanation

Survey questions are yes/no type answers, and checkboxes allow only two options: true or false.

[Learn more here](#)

Question 6:

You are a Power Platform functional consultant.

You are building a Canvas app for surveying customers and prospects. Each survey question has only two options. There are multiple survey questions, and you need to provide a Next screen option to move to the question screen. Which one of the following properties should you set on the Next button?

- A. OnChange
- B. OnSelect
- C. OnVisible
- D. OnStart

Answer Area

B. OnSelect

Explanation

The OnSelect property has the action to be performed when a button is clicked. So, use the OnSelect property.

[Learn more here](#)

[Learn about the Button control here](#)

Question 7:

You are a Power Platform functional consultant.

You are building a Canvas app for surveying customers and prospects. You need a control that allows users to choose from provided choices and must also support search and multiple selections. Which one of the following control should you use?

- A. Slider

- B. Combo box
- C. Text Input
- D. Check box

Answer Area

B. Combo box

Explanation

The Combo box control allows users to make selections from provided choices. It also supports search and multiple selections.

[Learn more here](#)

Question 8:

You are a Power Platform functional consultant.

You need to create reusable components that many canvas apps can share. What should you use?

- A. A web resource
- B. A template
- C. A component in Canvas app
- D. A component library

Answer Area

D. Component library

Explanation

Component libraries are used to create reusable components that many canvas apps can share.

[Learn more here](#)

[Learn more about the Component library here](#)

Question 9:

You are a Power Platform functional consultant. Your company is deploying a portal app. There's a requirement for external users to access data using the portal and must be able to submit requests. What are the two options available? Each answer presents a complete solution.

- A. Enable open registration
- B. Add external users as guests to Azure Active Directory
- C. Create a new portal just for external users
- D. Send the user an invitation code
- E. Add external users as users in Power Platform Admin Center

Answer Area

A. Enable open registration

D. Send the user an invitation code

Explanation

Open registration is the least restrictive sign-up configuration where the portal allows a user account to be registered by providing their user identity. With this option, users will be able to access data and also submit requests. [Learn more here.](#)

You can also send an invitation code to the users. They can redeem the invitation code when signing into the portal. [Learn more here](#)

Question 10:

You are a Power Platform functional consultant. You have two tables in an environment that has parent and child relationships. You need to display three columns of data from the parent table to the child table main form.

Solution: You must create a new business rule.

Does the solution meet the requirements?

- A. True
- B. False

Answer Area

- B. False

Explanation

Business rules cannot access fields from related entities. [Learn more here](#)

Question 11:

You are a Power Platform functional consultant. You have two tables in an environment that has parent and child relationships. You need to display three columns of data from the parent table to the child table main form.

Solution: Add three new column mappings

Does the solution meet the requirements?

- A. True
- B. False

Answer Area

- B. False

Explanation

The mappings will be applicable only for new rows, and mappings do not maintain changes in the mapped columns. [Learn more here](#)

Question 12:

You are a Power Platform functional consultant. You have two tables in an environment that has parent and child relationships. You need to display three columns of data from the parent table to the child table main form.

Solution: Add three new rollup columns.

Does the solution meet the requirements?

- A. True
- B. False

Answer Area

- B. False

Explanation

Rollup columns are used to retrieve and aggregate data from related child rows, while the goal is to get data from a parent row. [Learn more here](#)

Question 13:

You are a Power Platform functional consultant. You have two tables in an environment that has parent and child relationships. You need to display three columns of data from the parent table to the child table main form.

Solution: Add a new quick view form

Does the solution meet the requirements?

- A. True
- B. False

Answer Area

- A. True

Explanation

This is correct. A quick view form can display information from a parent row within the form of a child row. [Learn more here](#)

Question 14:

You are a Power Platform functional consultant. Your company is using multi-stream dashboards for managing customer issues and feedback. You need to enable a column to be used in the global filter. Which one of the following column properties should you enable?

- A. Enable column security
- B. Enable auditing
- C. Enable Sortable in interactive experience dashboard
- D. Enable Appears in the global filter in the interactive experience dashboard

E. Enable Appears in the global filter in the multi-stream dashboard

Answer Area

D. Enable Appears in the global filter in the interactive experience dashboard

Explanation

The correct answer is to enable “Enable Appears in the global filter in interactive experience dashboard.” This option allows you to use the column as a filter condition in interactive experience dashboards. [Learn more here](#)

Question 15:

You are a Power Platform functional consultant. You created a new model-driven app for one of the departments. You need to enable access to the new app for the department. Which three steps will you perform?

- A. Create an owner team.
- B. Assign users to the owner team.
- C. Assign the owner team to the app.
- D. Create a custom security role.
- E. Assign the security role to the app.
- F. Assign users to the custom security role.

Answer Area

- D. Create a custom security role.
- F. Assign users to the custom security role.
- E. Assign the security role to the app.

Explanation

You should perform the following actions in order:

1. Create a custom security role.
2. Assign users to the custom security role.
3. Assign the security role to the app.

A model-driven app uses the role-based security model for sharing.

So, to share a new app, a new role must exist, and then the app can be shared among the users who have this security role.

Finally, the security role should be assigned to the app.

[Learn more here](#)

Question 16:

You are a Power Platform functional consultant. You have a custom table in a model-driven app used by multiple agents. The agents must be able to create rows for the custom table without leaving the current row form. Which two steps should you perform for configuring the table?

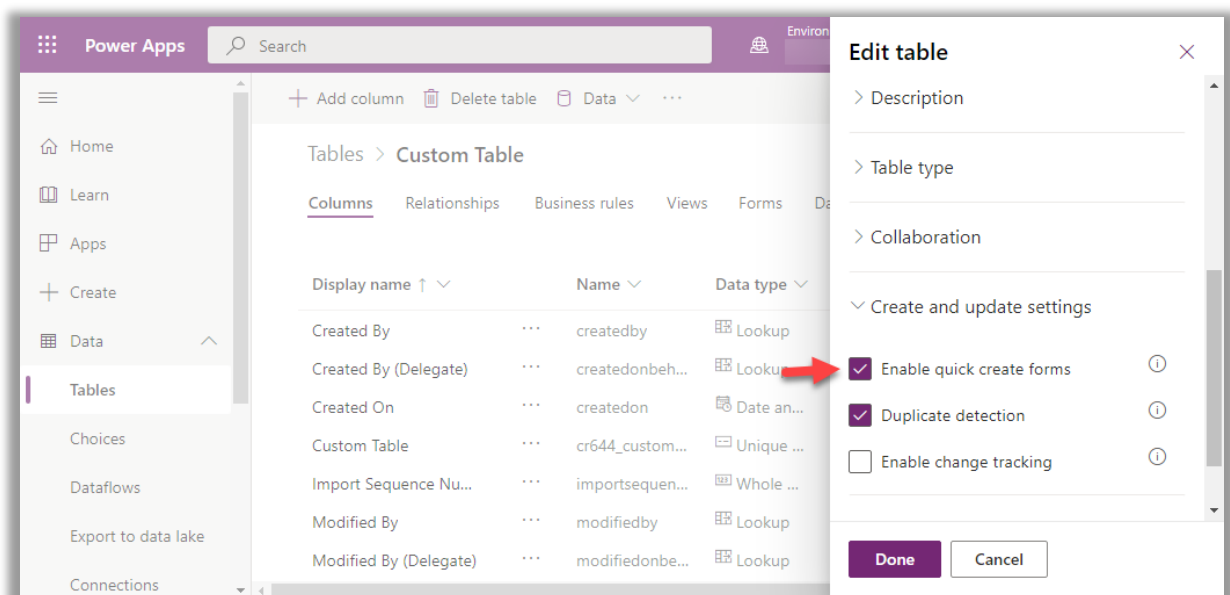

- A. Create a quick view form.
- B. Create a quick create form.
- C. Create a main form.
- D. Assign a security role to the form.
- E. Enable quick create on the table properties.
- F. Enable Allow Feedback on the table properties.
- G. Add the timeline control to the form.

Answer Area

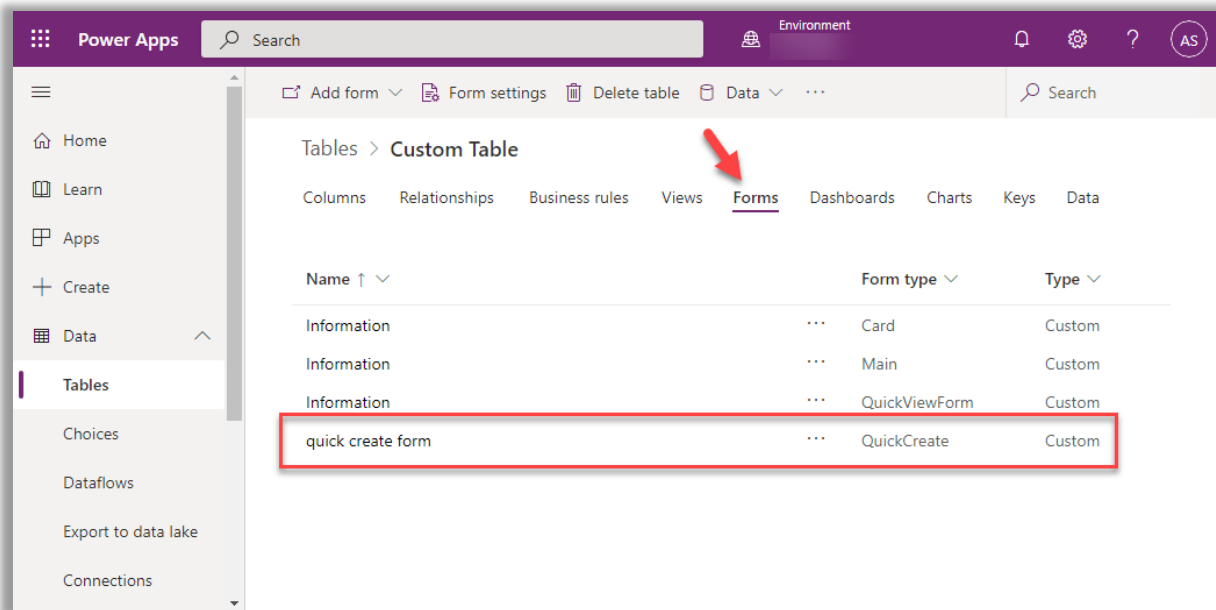

- E. Enable quick create on the table properties.
- B. Create a quick create form.

Explanation

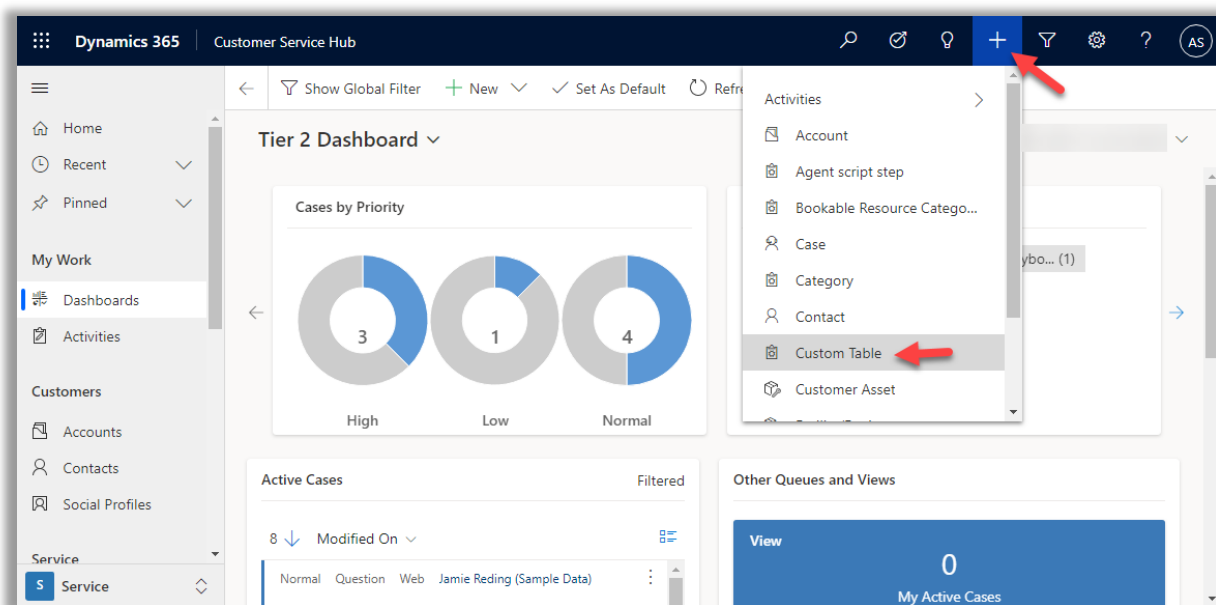

You should also set enable quick create forms on the table properties. This is a necessary step for using quick create.

You should create a quick create form. A quick create form is not created automatically when a table is created, so you must create a quick create form.

Then, you will be able to use the Quick Create form.

Question 17:

You are a Power Platform functional consultant. As a part of the routine, Dataverse and model-driven apps configurations are optimized every month. One of the table's forms is loading very slow, and users are complaining about it.

You need to resolve this issue.

Solution: Create a business rule to hide columns on the form.

Does this solution meet the requirement?

A. True

B. False

Answer Area

B. False

Explanation

This is incorrect. Adding a business rule to hide columns may result in the further slow down opening of the form. [Learn more here](#)

Question 18:

You are a Power Platform functional consultant. As a part of the routine, Dataverse and model-driven apps configurations are optimized every month. One of the table's forms is loading very slow, and users are complaining about it.

You need to resolve this issue.

Solution: Reduce the number of columns on the form

Does this solution meet the requirement?

A. True

B. False

Answer Area

A. True

Explanation

This is correct. You should keep the number of columns to a minimum. The more columns a form has, the more data needs to be retrieved and transferred over the network. Consequently, the form takes longer to load. [Learn more here](#)

Question 19:

You are a Power Platform functional consultant. As a part of the routine, Dataverse and model-driven apps configurations are optimized every month. One of the table's forms is loading very slow, and users are complaining about it.

You need to resolve this issue.

Solution: Move all of the form's columns into one section

Does this solution meet the requirement?

A. True

B. False

Answer Area

B. False

Explanation

This is incorrect as it will have little effect on the form's load speed. [Learn more here](#)

Question 20:

You are a Power Platform functional consultant. As a part of the routine, Dataverse and model-driven apps configurations are optimized every month. One of the table's forms is loading very slow, and users are complaining about it.

You need to resolve this issue.

Solution: Move all of the form's sections onto a single tab

Does this solution meet the requirement?

- A. True
- B. False

Answer Area

- B. False

Explanation

This is incorrect as it will have little effect on the form's load speed. Multiple tabs will improve form load speed as tabs (apart from the first tab) are only rendered when clicked on. [Learn more here](#)

Question 21:

You are a Power Platform functional consultant. As a part of the routine, Dataverse and model-driven apps configurations are optimized every month. One of the table's forms is loading very slow, and users are complaining about it.

You need to resolve this issue.

Solution: Delete old rows from the table.

Does this solution meet the requirement?

- A. True
- B. False

Answer Area

- B. False

Explanation

This is incorrect. Slow loading of form does not depend of the rows available in the table as a form opens only one row at a time. [Learn more here](#)

Question 22:

You are a Power Platform functional consultant. You are educating a team of new consultants on model-driven apps. You need to explain the sub-area properties of the sitemap.

Requirement: You need to control the visibility of a table in the sitemap.

Which one of the following sub-area property meets the requirement?

- A. Privileges
- B. SKUs
- C. Client
- D. Offline Availability
- E. More Titles

Answer Area

- A. Privileges

Explanation

You should use the Privilege property to control the visibility of a table in the site map. [Learn more here](#)

Question 23:

You are a Power Platform functional consultant. You are educating a team of new consultants on model-driven apps. You need to explain the sub-area properties of the sitemap.

Requirement: Control the visibility of a table in the site map based on the version or deployment of Dynamics 365 or Power Platform.

Which one of the following sub-area property meets the requirement?

- A. Privileges
- B. Client
- C. Offline Availability
- D. SKUs
- E. More Titles

Answer Area

- D. SKUs

Explanation

You should use the SKU property to control a table's visibility in the site map based on the version or deployment of Dynamics 365 or Power Platform. [Learn more here](#)

Question 24:

You are a Power Platform functional consultant. You are educating a team of new consultants on model-driven apps. You need to explain the sub-area properties of the sitemap.

Requirement: Control the visibility of a table in the site map based on the client the user is running, for example, Web or Outlook.

Which one of the following sub-area property meets the requirement?

- A. Privileges
- B. Client
- C. Offline Availability
- D. SKUs
- E. More Titles

Answer Area

B. Client

Explanation

You should use the Client property to control a table's visibility in the site map based on the client the user is running, for example, Web or Outlook. [Learn more here](#)

Question 25:

You are a Power Platform functional consultant. You are educating a team of new consultants on model-driven apps. You need to explain the sub-area properties of the sitemap.

Requirement: Control the visibility of a table when using the Outlook add-in client.

Which one of the following sub-area property meets the requirement?

- A. Privileges
- B. Client
- C. Offline Availability
- D. SKUs
- E. More Titles

Answer Area

C. Offline Availability

Explanation

Offline Availability property is used to control a table's visibility when using offline in the Outlook add-in client. [Learn more here](#)

Question 26:

You are a Power Platform functional consultant. You are educating a team of new consultants on Editable grids.

Statement: You can trigger a business rule on dashboards and refresh data conditionally.

If the above statement is correct, select True. Otherwise, select False.

- A. True

B. False

Answer Area

B. False

Explanation

The business rule will not work and trigger in dashboards. [Read more here](#)

Question 27:

You are a Power Platform functional consultant. New functionality is implemented with the help of a custom table. Users are complaining that they are unable to see the newly created table in the navigation menu. You need to resolve this issue.

Solution: Add a new column and republish the custom table.

Does the solution meet the requirement?

A. True

B. False

Answer Area

B. False

Explanation

Republishing the table allows the latest development changes to be visible & accessible to users but does not affect the navigation menus. These are set up within the sitemap only. Adding a new column to the table will not make any difference in this scenario.

Question 28:

You are a Power Platform functional consultant. New functionality is implemented with the help of a custom table. Users are complaining that they are unable to see the newly created table in the navigation menu. You need to resolve this issue.

Solution: Add the custom table to the sitemap for the model-driven app.

Does the solution meet the requirement?

A. True

B. False

Answer Area

A. True

Explanation

For tables to be shown in the navigation menu for users, they need to be added to the sitemap for the model app.

Question 29:

You are a Power Platform functional consultant. New functionality is implemented with the help of a custom table. Users are complaining that they are unable to see the newly created table in the navigation menu. You need to resolve this issue.

Solution: Create a business rule to show the users the table

Does the solution meet the requirement?

- A. True
- B. False

Answer Area

- B. False

Explanation

Business rules are not able to affect the navigation menus in model-driven apps.

Question 30:

You are a Power Platform functional consultant. New functionality is implemented with the help of a custom table. Users are complaining that they are unable to see the newly created table in the navigation menu. You need to resolve this issue.

Solution: Publish the view for the custom table in the model-driven app.

Does the solution meet the requirement?

- A. True
- B. False

Answer Area

- B. False

Explanation

This solution will only publish the view but will not add the table to the navigation menu.

Question 31:

You are a Power Platform functional consultant. You have implemented Dynamics 365 Customer Service Hub app. The app must be accessed on their Apple mobile device. However, the users are unable to access the Customer Service Hub app on their Apple mobile device using Dynamics 365 mobile app.

You need to resolve this issue.

Solution: You should use a model-driven app. Only model-driven apps can run on the Dynamics 365 mobile app.

Is this one of the requirements to access the app on Apple mobile device?

- A. True
- B. False

Answer Area

A. True

Explanation

This is correct. Only model-driven apps can run on the Dynamics 365 mobile app. [Learn more here](#)

Question 32:

You are a Power Platform functional consultant. You have implemented Dynamics 365 Customer Service Hub app. The app must be accessed on their Apple mobile device. However, the users are unable to access the Customer Service Hub app on their Apple mobile device using Dynamics 365 mobile app.

You need to resolve this issue.

Solution: You should use the Power Apps mobile app.

Is this one of the requirements to access the app on Apple mobile device?

- A. True
- B. False

Answer Area

B. False

Explanation

This is incorrect. Although the Power Apps app can run model-driven apps, the Power Apps mobile app cannot run Dynamics 365 Customer Engagement apps such as Dynamics 365 Customer Service Hub. [Learn more here](#)

Question 33:

You are a Power Platform functional consultant. You have implemented Dynamics 365 Customer Service Hub app. The app must be accessed on their Apple mobile device. However, the users are unable to access the Customer Service Hub app on their Apple mobile device using Dynamics 365 mobile app.

You need to resolve this issue.

Solution: You can only access it on an Android device.

Is the solution correct?

- A. True
- B. False

Answer Area

B. False

Explanation

You should not supply an Android device. The mobile apps run on Android, Apple iOS, and Windows devices. [Learn more here](#)

Question 34:

You are a Power Platform functional consultant. You have implemented Dynamics 365 Customer Service Hub app. The app must be accessed on their Apple mobile device. However, the users are unable to access the Customer Service Hub app on their Apple mobile device using Dynamics 365 mobile app.

You need to resolve this issue.

Solution: Configure Dynamics 365 for mobile privilege.

Is this one of the requirements to access the app on Apple mobile device?

- A. True
- B. False

Answer Area

A. True

Explanation

You should enable Dynamics 365 for mobile privilege in the user's security role. This privilege is required to access apps on a mobile device. [Learn more here](#)

Question 35:

You are a Power Platform functional consultant. You have implemented Dynamics 365 Customer Service Hub app. The app must be accessed on their Apple mobile device. However, the users are unable to access the Customer Service Hub app on their Apple mobile device using Dynamics 365 mobile app.

You need to resolve this issue.

Solution: You must use Dynamics 365 mobile app.

Is this one of the requirements to access the app on Apple mobile device?

- A. True
- B. False

Answer Area

A. True

Explanation

You should install the Dynamics 365 mobile app. This mobile app is required to run Dynamics 365 Customer Engagement apps such as Dynamics 365 Customer Service Hub. [Learn more here](#)

Question 36:

You are a Power Platform functional consultant. You are educating a team of new consultants on canvas apps. You need to automate the regression testing of the canvas app.

Which one of the following tools will meet the requirement?

- A. Monitor
- B. Application Insights
- C. Easy Repro
- D. Test Studio

Answer Area

- D. Test Studio

Explanation

Test Studio allows you to create test steps and cases to re-run when your app is updated or changed. This is regression testing. You can automate the testing by integrating Test Studio with Azure DevOps pipelines. [Learn more here](#)

Question 37:

You are a Power Platform functional consultant. You are educating a team of new consultants on canvas apps. You need to debug canvas apps to see how events and formulas in your apps work.

Which one of the following tools will meet the requirement?

- A. Monitor
- B. Application Insights
- C. Easy Repro
- D. Test Studio

Answer Area

- A. Monitor

Explanation

The Monitor allows you to view the events that occur in an app in real-time. [Learn more about Monitor here](#)

[Learn about debugging canvas apps](#)

Question 38:

You are a Power Platform functional consultant. You are educating a team of new consultants on canvas apps. You need to collect information on how users are using canvas apps.

Which one of the following tools will meet the requirement?

- A. Monitor
- B. Application Insights
- C. Easy Repro
- D. Test Studio

Answer Area

B. Application Insights

Explanation

Application Insights is an Azure service that allows you to collect information on how users actually use your apps. [Learn more here](#)

Question 39:

You are a Power Platform functional consultant. You create a canvas app and give access to users. The requirement is to use the canvas app on offline mode, and data should be uploaded when the connection is restored.

Which one of the following should you use?

- A. Dynamics 365 mobile app
- B. Power Apps player app
- C. Web browser
- D. All of the above options are supported

Answer Area

B. Power Apps player app

Explanation

Canvas app offline functionality only works in the Power Apps Player app, not through the Dynamics 365 app or a browser. [Learn more here](#)

Question 40:

You are a Power Platform functional consultant. You need to deploy the portal app as per the business needs.

Requirement: Allow authenticated users to access pages and current data.

Which one of the following features should you use?

- A. Entity List
- B. Entity Permissions
- C. Web Role

D. Web Page

Answer Area

C. Web Role

Explanation

You should assign a web role to authenticated users to allow them to access pages and current data. Authenticated portal users must have a web role to access data. [Learn more here](#)

Question 41:

You are a Power Platform functional consultant. You need to deploy the portal app as per the business needs.

Requirement: Allow new portal users to access the current data automatically.

Which one of the following features should you use?

- A. Access control role
- B. Authenticated users role
- C. Account scope
- D. Anonymous users role

Answer Area

B. Authenticated users role

Explanation

You should set the Authenticated Users Role option on a web role. The web role with Authenticated Users Role set to True is the default web role for authenticated users who have not explicitly assigned a web role.

Therefore, all newly created portal users will use this role and be automatically able to access the data on current offers.

There should only be one web role with Authenticated Users Role option set to True for a portal site. [Learn more here](#)

Question 42:

You are a Power Platform functional consultant. You need to deploy the portal app as per the business needs.

Requirement: Allow you to prevent access to current data by anonymous users.

Which one of the following features should you use?

- A. Create a web role
- B. Create an entity permissions record
- C. Enable the entity permissions option
- D. Restart the portal

Answer Area

C. Enable the entity permissions option

Explanation

This option requires that users have a web role and that the web role has entity permissions on the page to view the page.

Enabling the entity permissions option on a page means that unauthenticated users and authenticated users cannot access the page without the correct entity permissions.

[Learn more here](#)

[Learn more about authentication, registration, and other settings](#)
